A Study of Present-day English Usage

Leonard Survey Re-examined through Questionnaires

Hiroshi Otsuki

1. Current English Usage by Leonard

Current English Usage, the study of gathered opinions about usage of the words and expressions usually questioned or condemned in grammars and textbooks, is a result of a survey initiated by Sterling A. Leonard. It was completed after his death and published by the Publication Committee of the National Council of Teachers of English in 1932. The purpose of his study was set forth in the following statement at the outset of the article, "Current Definitions of Levels in English Usage" by Leonard and Moffett, published in the English Journal for May, 1927 (pages 345–359). This study was attempted to find out what various judges have observed about the actual use or non-use by cultivated persons of a large number of expressions usually condemned in English textbooks and classes.

Current English Usage, which appeared five years later, in 1932, was an enlargement of the earlier project, employing the same method and having the same purpose in view. The Leonard Survey is not a survey of the facts of the English usage but of opinions about the standing of various debatable items. The guiding principle of the survey is indicated succinctly in the statement that "allowable usage is based on the actual practice of cultivated people rather than on rules of survey or logic." He examined the actually written and spoken English. His survey provides the evidence to demonstrate the discrepancy between the actual usage and rules of the grammar.

The method which Leonard and his associates pursued in order to get a consensus of expert opinions is followed. They submitted a list of 230 expressions whose standing might be questionable to the judges. They were 229 Englishmen and Americans, who were linguistics, editors, authors, business men and teachers of English and speech. The judges were asked to place the items into one of four categories according to the observation of what actual usage is rather than their opinions of what usage might be. The following is the part of the instructions to the judges.

The following list of expressions represents an attempt to present one or more
A Study of Present-day English Usage

examples from each of the levels or regions of usage suggested by Dr. Murray in the preface to the New English Dictionary. We hope, by getting a consensus of expert opinion on the classification of these expressions, to clarify and define more precisely the categories themselves...

Score, please, according to your observation of what is actual usage rather than your opinion of what usage should be. For example, if you detest like as a conjunction, but observe it as a standard literary use, you should mark 1....

Finally, please do not mark according to your own definitions of categories or term below... for the purpose of this study use the definitions offered here....

Key Number  Definition of Terms
1.    Formally correct English, appropriate chiefly for serious and important occasions, whether in speech or writing; usually called "Literary English."
2.    Fully acceptable English for informal conversation, correspondence, and all other writing of well-bred ease; not wholly appropriate for occasions of literary dignity: "standard, cultivated, colloquial English."
3.    Commercial, foreign, scientific, or other technical uses, limited in area of comprehensibility; not used outside their particular area by cultivated speakers: "trade or technical English."
4.    Popular or illiterate speech, not used by persons who wish to pass as cultivated, saved to represent uneducated speech, or to be jocose; here taken include slang or argot, and dialect forms not admissible to the standard or cultivated area; usually called "vulgar English" but with no implication necessarily of the current meaning of vulgar: "naïf, popular, or uncultivated English."

The various ratings are tabulated and results are presented in Current English Usage in three lists, Items are arranged in the order of their acceptability. The rank indicating most complete approval is No. 1 and that indicating most complete disapproval is No. 230. The items are divided into three groups, indicated as Established, Disputable, and Illiterate. The Established items, which the judges agreed upon as being either literary or cultivated colloquial English, are those approved by at least 75 per cent of the judges and disapproved by not more than 25 per cent. The Disputable items, which are placed in a middle group, are those approved by fewer than 75 per cent, and disapproved by more than 25 per cent. The Illiterate items, as uncultivated or popular English, are those approved by fewer than 25 per cent of the judges and disapproved by more than 75 per cent.

2. Fact About Current English Usage by Marekwardt and Walcott
and our survey re-examined by authoritative materials in 1969

In 1938, six years after the publication of Current English Usage, Fact About
Current English Usage was published by Albert H. Marckwardt and Fred G. Walcott. They pointed out that Leonard and his associates had made a survey of the opinions about usage rather than the facts of usage and that this appeal to opinions might be said to have decisive results in less than one-half of the cases submitted to the judges. Their purpose was to supplement the survey of opinions, which formed the basis of the Leonard monograph, with a survey of the recorded usage. They attempted to make the Leonard Survey as objective as possible by using the Oxford English Dictionary mainly. They placed the various expressions into one of the following categories, Literary English, American Literary English, Colloquial English, American Colloquial English, Dialect and Archaic. We must offer a few explanatory comments about their use of the terms. If an expression was recorded without a limiting label in the authoritative materials, and if there were at least one citation from the nineteenth century, the expression was considered Literary English. The term Colloquial English means that an word or expression is to be found in spoken or informal written English. If an expression was recorded without comment, but the citations appeared to have been drawn from informally written material or from dialogue, it was recorded as Colloquial English. But if an expression was labeled colloquial in the dictionary but the citations were chiefly drawn from works of a serious literary nature, they felt justified in classifying such an item as Literary English. The words and expressions for which no citations after 1800 were found in the Oxford Dictionary were listed as Archaic unless one of the other sources indicated that they were still in present use. If a word was labeled both dialect and archaic by the dictionaries, it was placed in the Dialect category on the ground that it was still in use somewhere at the present time.

In 1969, we made an investigation to supplement the survey of the judges’ opinions with that of recorded usage and to find out the changes of usage level of dabatable words and expressions in forty years by using the authoritative dictionaries and grammars published after 1955. The result is recorded on The Journal of Otemae Women’s University published in 1971. The expression was placed in one of the following six categories, Literary English, General English, Colloquial English, Slang, Dialect and Archaic, when it was found recorded in one or more authorities.

3. This investigation

This investigation was intended to find out the change of usage level of the words and expressions in forty years and to demonstrate the discrepancy between the actual usage and rules of grammars. In other words our purpose is to know if the expression which was labeled as Standard English forty years ago has changed its label and is considered as Nonstandard English and vice versa. In the result of this survey we can understand the change of usage level of the expressions in forty years and find out that some expressions that were used are no longer understood by many informants.
A Study of Present-day English Usage

Our informants are twelve Americans who, except one, teach English in colleges and universities in Japan. The instructions to the judges are the same as those of the Leonard Survey. But the definition of usage level is different, because the Leonard's definition was not precise. The following is a part of the letter to the judges.

In the separate papers, from page 1 to 11, there are 230 sentences each of which includes the problem of usage level. The word of phrase about which there is question of placement is underlined; no other part of the sentences which may perhaps belong to a different level should influence a judgment as to the critical expression. The problem of pronunciation does not enter.

Score, please, according to your observation of what is actual usage rather than your opinion of what usage should be. For example, if you dislike *like* as a conjunction, but observe it as *Literary English*, you should mark it 1.

Comments on any or all the expressions or on reasons for your placement will of course be most welcome.

Please, do not mark according to your own definitions of the categories; for the purposes of this study use the definitions offered here.

Key Number Definitions of Terms
1. *Literary English*: typically used in serious writings, such as textbooks, reference works, scientific and scholarly treatises, philosophical and critical essays, literature (exclusive of dialogue), and magazines edited for a rather limited, highly educated audience, and in addresses on solemn or formal occasions and lectures to special audience.
2. *General English*: used both in written and spoken forms. Used in writings, such as business letters and advertising, newspaper columns, magazine articles, and literature for general circulation, and other writings intended for the general public and in conversation such as talks to generic audiences.
3. *Colloquial English*: used in familiar conversation of educated people, and in writings that are conversational in nature, such as personal letters, diaries and the like. Used within the family circle and among close friends and sometimes used by public speakers when the occasion is not formal and they feel sure of the sympathy of audience.
4. *Slang*: not appropriate for public affairs but heard in conversation at home, with friends or on job.
5. *Dialect*: used in limited regions but not in the entire area.

As a matter of course the differences between British usage and American usage might be found. If a certain *General* expression is found only in Britain or in America, then it should be labeled as 3B (means *General English* in Britain) or 3US
A Study of Present-day English Usage

(means General English in America) respectively. It is so with Literary English and Colloquial English.

We asked twenty people to fill out the questionnaire according to the instruction but twelve answers have been received till now. The main reason why we have received less than we expected is that the number of items on which we addressed the questionnaire was great. The number of 230 items was much trouble to the informants when they were asked to place the words and expressions into one of the categories, Literary English, General English, Colloquial English, Slang, Dialect and Archaic. We had only twelve informants, but if all the informants placed an expression in one of the categories, Literary English, General English, and Colloquial English, we decided it as Standard English. If twelve informants put an expression in Slang, Dialect or Archaic, it was definitely Nonstandard English. Thus when all the informants agreed about usage level of each item, we decided the level, even though the number of the informants was small.

In the next section we have the Standard English, that is, the words and expressions which all the informants placed in one of the categories, Literary, General and Colloquial English. We have also the Nonstandard English, that is, the words and expressions which all the informants put in one of the categories, Slang, Dialect and Archaic. These items are arranged in the order of their acceptability, which was decided by adding the score that the informants placed to the items. For example, if twelve informants agreed to place an in A Tale of Two Cities is an historical novel in the class of Literary English and mark 1 according to the instruction, the added score of the use of an was 12, which indicated most complete approval. If the twelve informants agreed an expression as Archaic and marked 6, the item achieved 72 scores, which meant the most complete disapproval. The items the meaning of which the informants did not understand and which they did not mark was the score 7.

To show the change of usage level of the words and expressions, we add the survey of Leonard, that of Markwardt and Walcott, and our survey made by grammars and dictionaries in 1969. The abbreviations which are used in the present investigation are as follows:

L. indicates the judgment of the Leonard Survey, followed by these abbreviations.
    Est.—Established Usage       Dis.—Disputable Usage
    Ill.—Illiterate Usage

MW. indicates the judgment of the Marckwardt-Walcott Survey, followed by these abbreviations.
    LE—Literary English          ALE—American Literary English
    CE—Colloquial English        ACE—American Colloquial English
    Dial—Dialect                Arch—Archaic
    //—Not recorded
A Study of Present-day English Usage

O. indicates the judgment of our previous survey, followed by these abbreviations.

LE—Literary English GE—General English
CE—Colloquial English Dial—Dialect
Arch—Archaic //—Not recorded

In each case the expression is quoted in full with the questionable point italicized.

4. Standard usages and Nonstandard usages

Standard usages

The items which all the judges agreed upon as being Literary English, General English, or Colloquial English,

1. Why *pursue* a vain hope?
   L Est 3: MW Established without grammatical problems: O GE
2. The honest person is to be applauded,
   L Est 23: MW Established without grammatical problems: O GE
3. I *drove* the car around the block.
   L Est 33: MW Established as colloquially technical: O GE
4. *One* rarely likes to do as *he* is told.
   L Dis 110: MW LE: O GE in U. S.
5. My position in the company was satisfactory from every *point of view*.
   L Est 14: MW Established without grammatical problems: O GE
6. The defendant's case was *hurt* by this admission.
   L Est 17: MW Established without grammatical problems: O GE
7. He stood in *front* of the class to speak.
   L Est 24: MW Established without grammatical problems: O GE
8. *This much* is certain.
   L Est 25: MW Established without grammatical problems: O GE
9. Take two *cups* of flour.
   L Est 32: MW Established as colloquially technical: O GE
10. Is your insurance sufficient *coverage* for your house?

15. The man was *very amused*.
    L Dis 146: MW LE: O GE
A Study of Present-day English Usage

16. This is a man.... I used to know. (Omitted relative)
   L Est 9: ME LE: O GE

17. Under these circumstances, I will concede the point.
   L Est 20: MW Established without grammatical problems; O GE

18. He has no fear; nothing can confuse him.
   L Est 27: MW Established without grammatical problems: O GE

19. Will you be at the Browns' this evening?
   L Est 51: MW LE: O GE

20. That clock must be fixed.
   L Dis 108: MW ACE: O GE in U. S.

Nonstandard usages

1. You was mistaken about that, John.
   L Ill 220: MW Dial: O Dial

2. It don't make any difference what you think.
   L Dis 158: MW ACE: O Dial

3. He won't leave me come in.
   L Ill 217: MW ACE: O Slang

4. Martha don't sew as well as she used to.
   L Dis 168: MW ACE: O Dial

5. He looked at me and says.
   L Ill 205: MW CE: O Slang

6. It was dark when he come in.
   L Ill 219: MW Dial: O Dial

7. Somebody run past just as I opened the door.
   L Ill 227: MW Dial: O Dial

8. My cold wa'nt any better next day.
   L Ill 223: MW Dial: O //

9. He begun to make excuse.
   L Ill 201: MW CE: O Dial

10. I have drank all my milk.
    L Ill 210: MW Arch: O Arch

11. The old poodle was to no sense agreeable.
    L Ill 212: MW //: O //

5. The items on which 90 per cent of informants agree

We had twelve informants, but we thought if eleven out of twelve informants agreed about usage level of the words and expressions, we decided their levels. The following items are those which eleven, that is 90 per cent of informants placed in one of the categories, Literary English, General English, and Colloquial English. They are also Standard English.
In this connection, I should add . . .

He doesn’t do it the way I do.

We have made some progress along these lines.

The catcher stands back of the home plate.

Jane was home all last week.

I’d like to make a correction.

The banker loaned me $200 at 6%.

He never works evenings or Sundays.

I have no prejudice, and that is the cause of my unpopularity.

He did not do as we expected.

I was attacked by one of those huge police dogs.

Pikes Peak is in Colorado.

It says in the book that . . .

He made a date for next week.

The data is often inaccurate.

Each person should of course bear his or her share of the expense.

I for one hope he will be there.

We can expect the commission to at least protect our interest.

The real reason he failed was because he tried to do too much.

Harry was a little shaver about this tall.
41. They had numerous strikes in England in 1860.
   L Est 65: MW CE: O GE
42. I will probably come a little late.
   L Dis 135: MW LE: O GE
43. Yes our plan worked just fine.
   L Dis 161: MW Dial: O CE
44. The New York climate is healthiest in fall.

L Ill 213 : MW // : O Slang

24. His presence was valueless not only, but a hindrance as well.
L Dis 172 : MW // : O //

25. I enjoy wandering among a library.
L Ill 214 : MW LE : O //

6. Conclusion

The words and expressions which were Established in the Leonard Survey and are placed in the class of Standard usage in this survey are forty-four. But the items which were once Established but have become Disputable are twenty-seven. The following is the comparison between the Leonard Survey and this investigation.

<table>
<thead>
<tr>
<th>Leonard Survey and this investigation</th>
</tr>

<tbody>
<tr>
<td></td>
</tr>
<tr>
<td>Established</td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td>Disputable</td>
</tr>
<tr>
<td>Illiterate</td>
</tr>
<tr>
<td>Total</td>
</tr>
</tbody>
</table>

The items which have not changed the levels are forty-four, ninety-one, and eighteen. These numbers are 66.5 per cent of 230 items. But the items which have changed their levels are seventy-seven, that is, 33.5 per cent of 230 items. One third of 230 items have changed their levels during forty years.

We compare our survey made by authorities in 1967 with this investigation.

<table>
<thead>

</tr>
</tbody>
</table>

We ignore Not Recorded items. 108 and 1 out of 176 Standard items in our previous survey have changed their levels. 27 out of 47 Nonstandard items also have changed their levels. We can say that 60.9 per cent of the items have changed their status, when we compare our survey by authorities with this survey of opinions.
A Study of Present-day English Usage

To make sure of this figure, we present the comparison between the Leonard Survey and the Marckwardt and Walcott Survey.

</tbody>
</table>

Comparing the Leonard Survey with the Marckwardt and Walcott Survey, 121 out of 191 Standard usage in the Marckwardt and Walcott Survey are Disputable and Illiterate in the Leonard Survey. Five out of twenty-five Nonstandard usage in the dictionaries survey are Disputable in the survey of opinions. In other words 57.8 per cent of 230 items have different levels. Roughly to say from two comparisons, about 60 per cent of words and expressions have discrepancy about usage level of the expressions, when we compare the survey of opinions with that of grammars and dictionaries. Opinions of people on usage level are rather conservative.

Notes
2. Ibid., p. 2.
7. The next items are those which half of the informants did not mark. The number indicates the ranking of acceptability in the Leonard Survey.
   75. This book is valueless, that one has more to recommend it. (Comma Splice)
   117. Such naif actions seem to me absurd. (Debated Spelling)
   156. Cities and villages are being stripped of all they contain not only, but often their very inhabitants. (Position of Adverb)
   172. His presence was valueless not only, but a hindrance as well.
